FORCE ROBOTIC NOZZLE SETUP INSTRUCTIONS

First start up and calibration of UNIFIRE FORCE Robotic Nozzle System with

Ammolite[™]

Graphical User Interface

Introduction

Unifire's Force Robotic Nozzle set up is achieved through our web browser-based graphical user interface (GUI), called *Ammolite* [™].

The Unifire TARGA Robotic Nozzle PLC connects to a standard TCP/IP based network. The built-in web server has been set up to be assigned an IP address by an external DHCP server.

This can be a local router or a dedicated server in a larger network, administered by your IT department or similar.

To connect to the Ammolite setup graphical user interface, open a browser (Chrome, Firefox, Safari, Edge etc) and enter http:// followed by the IP address and :81 at the end (for example, if the IP address is 192.168.0.45, enter into the browser: http://192.168.0.45:81).

To access the Ammolite setup environment, enter the username and password, which were provided to you with your system.

It is recommended that you make a note in the service log at login.

For further assistance, send your inquiry to support@unifire.com or call +46 303 248 404.

in this manual.

1) Open your web-browser (Safari, Chrome, Firefox or other).

2) Enter the IP Address of the TARGA PLC, followed by :81 (for example http://192.168.0.217:81). Push Enter.

3) Enter the username and password provided with your delivery.

4) In this example, both the username and password are "service". Click Login.

10) To calibrate Motor 4 (horizontal), click "Calibrate".

11) Select Min/Max method that allows you to freely select any operating range. (The Center method is used only for special applications when the operating range is pre-set in the software.)

12) Run the motor to the required Min position (left arrow), by using either the buttons on the screen (for tablets), or using the right/left arrow keys on your PC Keyboard. Once you have the position, Click "**Set new min**"

13) Run the motor to the required Max position (right arrow). Now the "Current position should read a value typically between 2 000 and 50 000. Click "**set new Max**".

MK 4
МК 5

16) Calibrate Motor 6 (nozzle jet/spray) in the same manner as you did the other motors, but follow the instructions in step 17 on the next page.

#### Set nozzle maximum (Motor 6), just before mechanical stop.

This is effectively selecting the straight stream.

Here you can block the straight stream by setting the

maximum to - say - 10 ° spray, and thereby avoid a straight steam.

This is useful when the required reach is short, and you want to avoid a hard-hitting straight steam altogether.

#### 17) Calibrate Motor 6 (jet/spray nozzle) as Motor 4 and Motor 5
